

FarmOracleMMO

Turn-by-turn helper for PokeMMO — Red, Gym Farm, Cynthia & Morimoto, Ho-Oh and the Elite 4

COMPLETE GUIDE · VERSION 1.6.0

1 What it is

FarmOracleMMO is a helper that sits in a **floating window/bubble** over the game and tells you, **turn by turn**, exactly what to do to win the game's hardest, most repeatable fights: **Red**, the **Gym Farm** (gym re-battles), **Cynthia & Morimoto**, **Ho-Oh** and the **Elite 4** across all 5 regions. It **narrows the possibilities as the battle goes** — you tell it what the opponent did, and it walks you to the exact winning line.

It is **not** an automation/bot — you play; it just shows the optimal script. Available for **Windows, macOS and Android**, all shipping the **same version with the same features**.

2 Install

Download the latest version at: github.com/.../prestrello-ajuda-download/releases/latest

WINDOWS	MACOS	ANDROID
Download the .zip , extract and open the .exe .	Open the .app . On macOS Sequoia (15+), use the included one-click opener if Gatekeeper blocks it the first time.	Install the .apk and grant the overlay permission ("draw over other apps").

Language: the app is fully bilingual. On first launch you pick **English** or Portuguese, and there is a one-tap **PT⇌EN** chip on the home screen to switch anytime.

3 The home menu

Every fight the app helps with is one tap away. Each mode has a ► **start** button and a ? **Poképaste** button (the exact team to build).

- **Elite 4** — all 5 regions (Kanto, Hoenn, Sinnoh, Unova, Johto).
- **Gym Farm** — re-battle gym leaders in double battles (18h cooldown) for big money. Routes: **Six Pillars** (Veteran & BASIC) and **Lucky Girl** (Seven Hells).
- **Cynthia & Morimoto** — the post-league double fight.
- **Red** — the Mt. Silver fight (multiple selectable strategies).
- **Ho-Oh** — the legendary rematch (incl. a Trick Room strategy).
- **Menu** — teams, Poképastes, sources and settings.

The footer shows the version, credits and quick links to the **Discord** and **YouTube**.

Screenshots in this guide are from the Android build (shown in Portuguese); every screen is identical in English once you set the language.

4 How the turn-by-turn works

Pick a mode, then pick your **lead / region**. The guide shows the current **node** and walks the fight with you:

- ▶ **Opponent on field** — a header shows which Pokémon you are facing.
- ▶ **Turn steps** — the exact actions (T1, T2...), with move names **colour-coded** and important **warning notes** highlighted in amber.
- ▶ **"What did the opponent do?"** — choice buttons; tap the answer and the guide **narrows to the exact winning line**.
- ▶ **See teams** — shows the opponent's **possible teams** (item, ability and all four moves), narrowing as the fight goes.
- ▶ **Progress** — a "step x / y" indicator, plus **Next**, **Back** (undo), **Reset** and **Skip this stop**.
- ▶ **Elite 4 sequence** — at the end of a fight it jumps straight to the next trainer in the run.

5 The floating overlay & controls

The panel floats over the game so you never alt-tab. Everything about it is adjustable:

Minimize to a bubble

Collapse to a small Ball anywhere on screen; tap to reopen exactly where you left off.

Always on top

Stays above the game window at all times.

Drag & resize

Move the window/bubble anywhere; resize the panel from the corner grip.

Opacity

A slider sets how transparent the panel is over the game.

Font size — A- / A / A+

A chip on the title bar scales the whole panel up or down for readability.

Keyboard shortcuts (desktop)

A global “Next step” hotkey works even with the game focused, plus **F1–F12** to pick the choices.

Search / filter

Filter long lists (leads, cities) to find what you need fast.

Android extras

“Open here” (no overlay) mode, foreground service and system notifications.

6 Teams, strategies & sources

Open **Menu** to manage everything. Teams are grouped by mode, and you can **select a team or strategy directly**:

- ▶ **Strategy selector** — e.g. Red has multiple teams, Ho-Oh has a **Trick Room** line, Cynthia & Morimoto has variants, the Elite 4 has several full teams (Shadow Scale, Reversed Fate, Dingxianyou, Starlight, Ghost Dance, Sacred Inferno...).
- ▶ **Per-team source buttons** — [video](#) [document](#) [Pokeking CODE](#) (copy the code and build the exact team in-game).
- ▶ **Poképaste button** — the full team with items, abilities, IVs and moves.
- ▶ **Emoji mode** — when a team ships an emoji version, view the fight in the author's original notation.
- ▶ **Language** — PT/EN selector, remembered between sessions.

7 Gym Farm — Six Pillars & Lucky Girl

The **Gym Farm** mode is a money-maker: you re-battle gym leaders in **double battles** on an 18-hour cooldown for a large payout. The app carries full step-by-step routes:

- ▶ **Six Pillars** — a fixed 6-mon team with two selectable routes: **Veteran** and **BASIC** (27 gyms, transcribed from the official docs).
- ▶ **Lucky Girl (Seven Hells)** — an alternative farm route (Meloetta-based).

Routes are grouped in a per-team submenu, each with its own Poképaste and source document.

8 Cooldown & farming timer

New in 1.6.0. A clock button opens a **timer hub** so you never lose track of your farm loops — especially useful if you run many alts.

- ▶ **Register your characters (alts)** and track **battle cooldowns**: Elite 4, farm routes, Red and Cynthia & Morimoto.
- ▶ **Berry timers** — the plant → water → harvest cycle, so you know exactly when to come back.
- ▶ **System alarm** — a banner + sound notification fires at the exact time, **even with the app closed**.

💡 A **sync (PC ⇌ phone)** mode is on the way, so a timer you start on one device shows up on the other.

9 Feedback, updates & help

- ▶ **"Worked / Didn't work"** — one-tap feedback on Elite 4 fights; "Didn't work" opens a box so you can tell us what happened.
- ▶ **Update checker** — the app tells you when a new version is out; critical releases can require an update before continuing.
- ▶ **Credits & links** — a footer with the version and shortcuts to the community.

10 Live updates site (roadmap)

Want to see what we're building in real time? We keep a **public, live roadmap** page:

🔗 farmoracle-roadmap.pages.dev

- ▶ **Solved** — everything that's already fixed, and in which version.
- ▶ **In progress** — what's being worked on right now.
- ▶ **Every request** — all community suggestions/bugs that are logged.
- ▶ **Platform parity** — what's ready on Mac, Windows and Android.
- ▶ **Version history** — what shipped in each release.

The page updates in real time — the moment we fix or log something, it shows up.

11 Discord community — how it works

Separated by language (PT / EN)

When you join, pick your language in `#language` (react with a flag). **English** members see only the English channels; Portuguese members see only the Portuguese ones. You can pick both.

Dual posting

Every announcement, update or new route goes out **in both languages** — never only one. You never miss anything because of language.

Main channels

- ▶ `#dev-diary` the work in real time (what changes each update).
- ▶ `#suggestions` request a feature or a new team/route.
- ▶ `#bug-report` found a bug? report it and we fix it next update.
- ▶ `#translations-pending` help confirm Pokeking terms.
